MEMORANDUM

Date: **APR 29 1991**

SUBJECT: REVIEW OF THE DRAFT "RECORD OF DECISION,  
SUMMARY OF REMEDIAL ALTERNATIVE SELECTION,  
MEDLEY FARM SUPERFUND SITE," GAFFNEY, SOUTH CAROLINA,  
APRIL 1991

TO: Jon K. Bornholm  
Remedial Project Manager  
North Superfund Remedial Branch

FROM: Tony Able, Hydrologist, P.G. *T.A.*  
Ground-Water Technology Unit

Per your request review of the subject document has been completed. I concur with the remedial alternative selected. It is the position of the Ground-Water Protection Branch to support remediation of ground water to potable quality. The remedy selected will return the ground-water in the aquifer beneath the site, and the ground-water downgradient of the site, to Primary Drinking Water Standards. There are several locations in the document where changes are needed.

In tables seven and eight the value for silver should be changed from 50 (an MCL) to 100 (a secondary MCL).

In the table before page 53 (Chemicals of Potential Concern) the chemicals of concern for the shallow aquifer and the bedrock aquifer should be the same. These aquifers are hydraulically connected, therefore, the potential for common contaminants exists.

If you have any questions concerning this matter contact me at extension 3866.
